Outline

Mockups

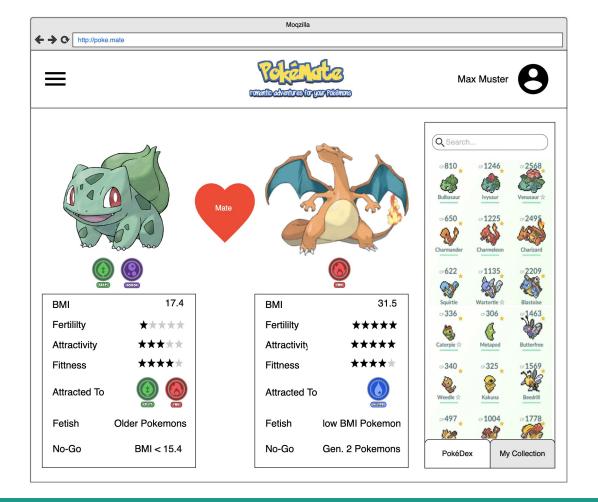

Technologies

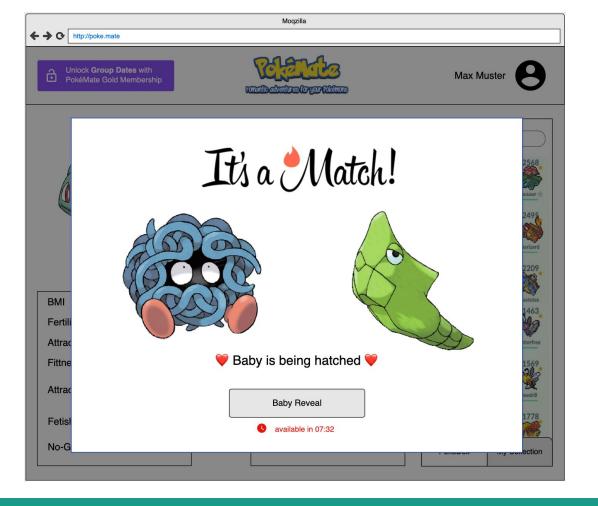

Pokemate Environment Overview

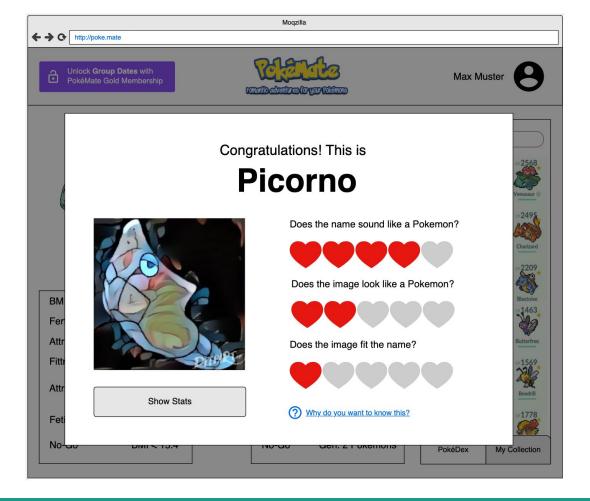

Github Progress/Walkthrough

Github Actions

Next Steps

Kanban Board

Organisation with unified Github project across all repositories

Continuous Integration

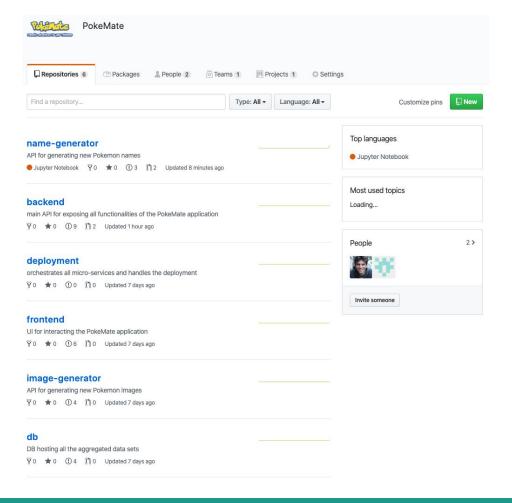

Github actions

API Documentation

Swagger

Quality Checks

Sonar Qube

All

All containers should be accessible by name

Frontend

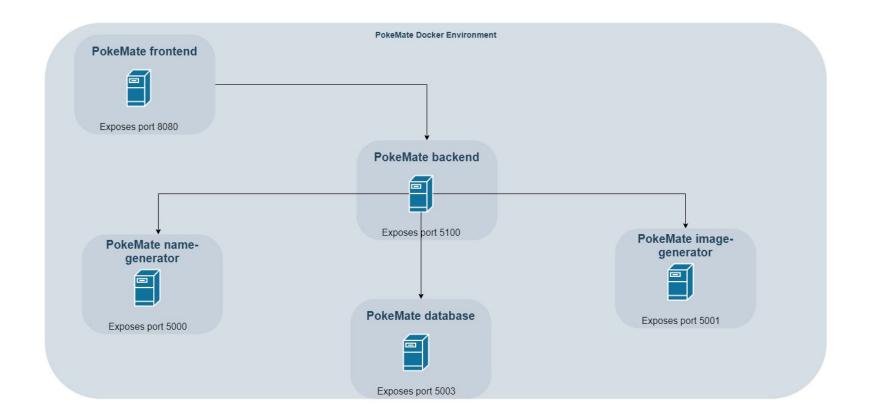

Frontend containers use ports from 8000 upwards

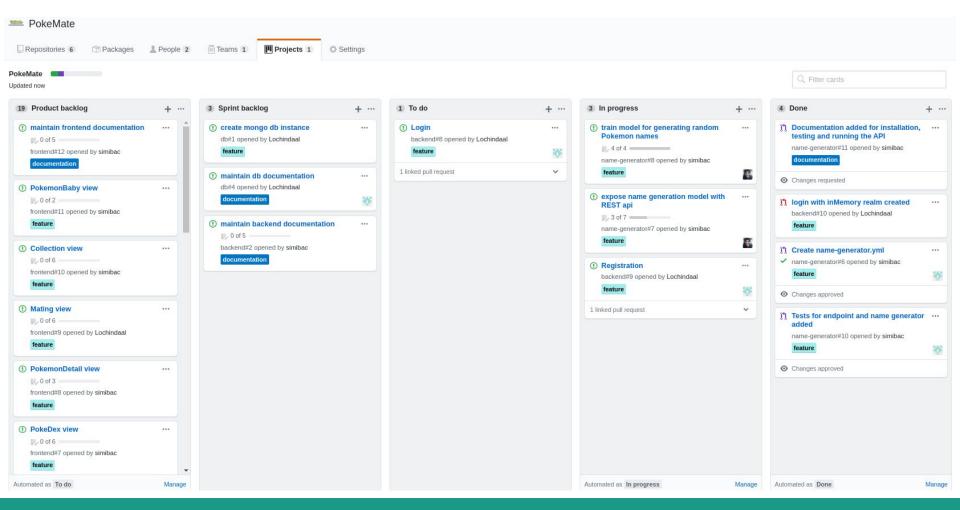

Externally exposed

Externally exposed containers use ports from 5100 upwards

Internally

Internal containers use ports from 5000 to 5099

PokeMate Sprint Overview

See link in email.

CI / CD tasks

All CI / CD tasks are implemented using GitHub Actions

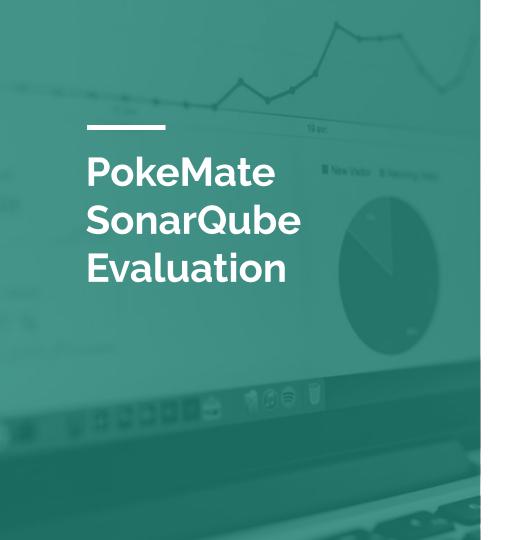

Reason

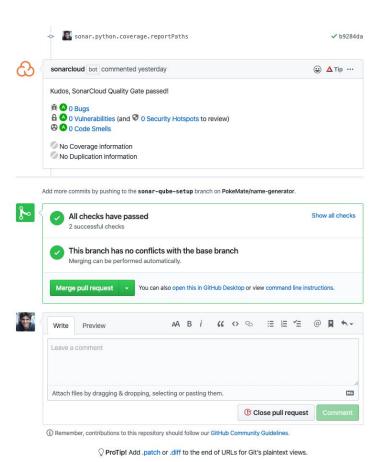

Github as a single point of collaboration for the whole team

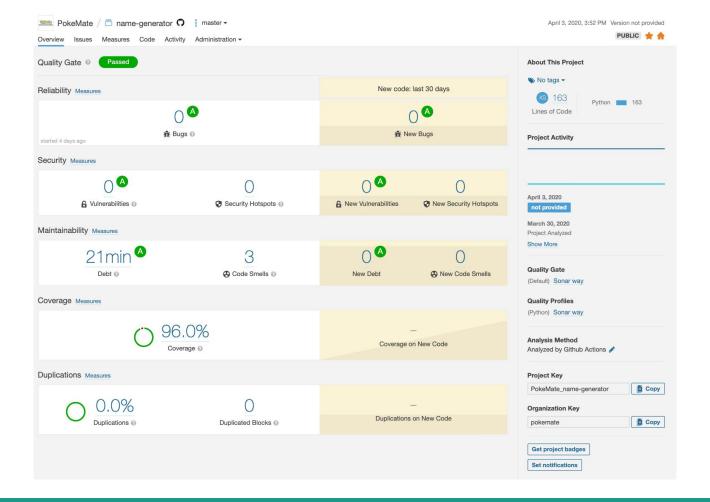

Java CI with Gradle on: pull_request	Java CI with Gradle / build succeeded now in 1m 50s		
✓ build	▶ ✓ Set up job		
	➤ ✓ Run actions/checkout@v2		
	▶ ✓ Set up JDK 1.8		
	Grant execute permission for gradlew		
	▶ ✓ Build with Gradle		
	✓ Build with Gradle		
	► ✓ Archive backend artifact		
	► ✓ Run actions/download-artifact@v1		
	▶ ✓ Build the Docker image		
	► ✓ Post actions/checkout@v2		
	▶ ✓ Complete job		

Dates

Create Date

POST /dates 🔐

Send two pokemons on a date.

This is a protected enpoint. Make sure you use the JWT in the authorization header:

Authorization: Bearer <token>

Required JSON data in body:

Parameter	Туре	Required	Description
id_0	int	yes	pokemon id
id_1	int	yes	pokemon id

Example request:

```
curl --location --request POST 'localhost:8080/pokemon' \
--header 'Authorization: Bearer eyJhbGciOiJTUzI1NiIsInR5cCIGIkpXVCJ9.eyJzdWIiOiIxMjMONTY3ODkwIiwibmFtZSIGIkpvaG4gRG9lI
--header 'Content-Type: application/json' \
--data-raw '{
        "id_0": 1,
        "id_1": 2
}'
```

Example response:

```
"date_id": 343
```

Define endpoints and implement communication between services

Create docker-compose

Create frontend

Make first version release (master)
